Design Justification

Dolaptan · MTM4681 Mobile Programming · Milestone · Team [TAKIM NO] · Hatice Karakuş, Muhammed Ali Demirsoy

Dolaptan is a shared kitchen for people who live together: one pantry everyone sees, Turkish recipes that use what is about to go off, and a shared shopping list. The screens look like a **hand-written family recipe notebook**: cream paper, pen outlines, hand-written titles and painted food. Cooking at home is personal, and a notebook feels warmer and more inviting than a store app, which matters for a habit people have to keep up every day. The structure underneath stays standard iOS (large titles, a floating tab bar with three tabs, grouped lists, sheets, segmented controls and switches), so the app is still quick to learn.

Color

The paper color matches the cream background of our illustrations, so paintings sit on the page without boxes. Terracotta appears only on things you can tap and on items that expire tomorrow, so the warmest color always means act now. Pantry states are tags with both a word and a color: Var green, Azaldı mustard, Yarın red. Dark Mode is a warm dark brown, not black, so the notebook feel stays at night.

	Token	Light	Dark	Use
	Paper	#F7EBDD	#1B1511	Page background with faint ruled lines (#EADBC6)
	Card	#FFFAF3	#2A211B	Hand-drawn cards, fields and the tab bar
	Ink	#2B1D14	#F7EBDD	Text and the pen outline around cards and buttons
	Pencil	#6B5646	#C8B6A3	Times, servings, who added an item, hints
	Terracotta	#B3401E	#FF8A65	Only things you can tap, and urgent expiry
	Herb green	#3B6E35	#9CCB8C	The Dolapta header and the Var state
	Tag red / green / yellow	#FAE4DB	#4A271D	Backgrounds of Yarın, Var and Azaldı tags

Contrast uses the WCAG 2.2 formula on linearized channels, ratio = (L1 + 0.05) / (L2 + 0.05). Every pair passes AA in both modes. The build script also checks every text on all 60 screens.

Text / background	Light	Dark	AA (4.5:1)
Ink on paper	13.88:1	15.39:1	Pass
Pencil text on a card	6.64:1	8.02:1	Pass
Tappable text on a card	5.51:1	6.81:1	Pass
Label on the main button	5.72:1	7.81:1	Pass
Yarın tag	4.68:1	5.68:1	Pass
Var tag	4.94:1	6.79:1	Pass
Azaldı tag	5.58:1	7.43:1	Pass

Typography

Two free Google Fonts (SIL Open Font License) that include every Turkish letter (ğ, ı, İ, ş, ç). **Caveat**, a pen script, is used only for short text such as titles, headers, buttons and tags, where personality matters and words are few. Longer text uses **Patrick Hand**, which looks hand-written but has print letter shapes, so recipe steps stay easy to read. Its letters are smaller than Inter at the same size, so we set it 10% larger. The iOS status bar and the wireframes keep Inter.

Role	Font, size	Sample	Use
Screen title	Caveat Bold 44	Dolap	Large titles
Section header	Caveat Bold 26	Yakında bozulacak	With a brush underline
Button, tag	Caveat Bold 22	Ne Pişirsem?	Short labels only
Body	Patrick Hand 18.7	Yumurtaları çırpıp dök.	Rows, steps, fields
Small	Patrick Hand 14.3	15 dk · 2 kişilik	Times, servings, hints

Illustrations and layout

- All food art is gouache style: dishes, 12 ingredients, 6 scenes for empty states, 12 small doodles (herbs, spoon, tea glass) and 6 vignettes. We generated them with Figma AI in batches with one shared style prompt, then cut, cleaned and selected them by hand. We keep only art that shows food accurately. Recipe pictures are illustrations, not photos, so nobody mistakes them for the real result.
- Cards, buttons and tags have a slightly uneven pen outline. Section headers have a brush underline and a small doodle. Empty states show a taped-in picture with a short title, one sentence and one action.
- Frame 360 x 800 pt, 16 pt margins, 28 pt ruled-line rhythm. Every tappable element is at least 44 x 44 pt, checked by the build script on every screen.

Accessibility and how the design supports users

- Color is never the only signal: states are words, checked items get a check mark, and uncertain scan results say "Emin değiliz, kontrol et".
- Less typing, the main complaint about competing apps: photo scan, estimated expiry dates the user only corrects, and Cooked / Bought update the pantry automatically.
- Fewer surprises: a "missing ingredients" limit in Preferences, a timer on steps that need one, and "Hesapsız Dene" to try the app before signing up.
- Icon buttons will have VoiceOver and TalkBack labels, and text will follow the system size setting.
