Design Justification

Dolaptan · MTM4681 Mobile Programming · Milestone · Team [TAKIM NO] · [AD SOYAD 1], [AD SOYAD 2]

Dolaptan turns a photo of a fridge or cupboard into three Turkish recipes. People use it while tired, in a hurry, or with one free hand in the kitchen. The design aims for few decisions, readable text, and clear control over what the AI suggests. It follows Apple's Human Interface Guidelines for iOS 26, so the app feels familiar to people who use Notes, Reminders or Health.

Visual language

- **Standard iOS patterns:** large-title navigation bars, a floating tab bar with three tabs (Ana Sayfa, Kayıtlı, Liste), inset grouped lists, a sheet for Preferences, segmented controls for time and servings, switches for allergies, and swipe to delete.
- **Rows instead of cards:** ingredients, recipes and list items are list rows, which are easier to scan and edit than stacked cards.
- **One emphasis per screen:** at most one filled button per screen (for example, Fotoğraf Çek or Devam Et). Other actions are plain text buttons.
- **Liquid Glass only for navigation:** following the HIG, the glass treatment is limited to the tab bar and the bar buttons. Content stays on solid system backgrounds. There are no gradients, large shadows or decorative shapes.

Color

Backgrounds are Apple's system colors. A single accent color, our terracotta, appears only on elements you can tap, so color always means an action. For secondary text we use Apple's increased-contrast gray #6C6C70, because the default gray #8E8E93 reaches only 3.26:1 on white. In Dark Mode the accent becomes lighter (#FF8A65) with a black label, because white on that color would fail AA.

	Token	Light	Dark	Use
	Grouped background	#F2F2F7	#000000	Screen background behind lists
	Cell	#FFFFFF	#1C1C1E	List rows and fields
	Label	#000000	#FFFFFF	Titles and body text
	Secondary label	#6C6C70	#AEAEB2	Times, servings, hints
	Separator	#C6C6C8	#38383A	Hairlines between rows
	Accent (terracotta)	#B3401E	#FF8A65	Only on things you can tap
	Destructive	#E9152D	#E9152D	Swipe-to-delete only

Contrast uses the WCAG 2.2 formula: L = 0.2126 R + 0.7152 G + 0.0722 B on linearized channels, ratio = (L1 + 0.05) / (L2 + 0.05). Every pair passes AA in both modes. The build script also checks every text in every screen.

Text / background	Light	Dark	AA (4.5:1)
Label on background	18.82:1	21.00:1	Pass
Secondary label on background	4.69:1	9.50:1	Pass
Secondary label on a row	5.23:1	7.69:1	Pass
Tappable text on a row	5.72:1	7.35:1	Pass
Tappable text on background	5.13:1	9.08:1	Pass
Label on the filled button	5.72:1	9.08:1	Pass
Selected tab label	5.13:1	4.90:1	Pass
Delete label on red	4.56:1	4.56:1	Pass

Typography

The scale follows iOS Dynamic Type at the default size. On iOS the app uses the system font, SF Pro. Mockups and the Android build use **Inter**. It is free, supports Turkish letters such as ğ, ı, İ and ş, and looks close to SF Pro. Apple's SF Pro license allows it only for Apple platforms.

iOS text style	Size / weight	Use in Dolaptan
Large Title	34 pt bold	Screen titles

iOS text style	Size / weight	Use in Dolaptan
Title 2	22 pt bold	Empty, error and offline states
Headline	17 pt semibold	Section headers, recipe names
Body	17 pt regular	Rows, steps, buttons
Footnote	13 pt regular	Times, servings, list footers

Layout

- We keep the course frame of 360 x 800 pt, 16 pt side margins and an 8 pt rhythm.
- Every tappable element is at least 44 x 44 pt. The build script measures this on every screen.
- Content stays clear of the status bar and the home indicator. The tab bar floats 21 pt from the edges.
- Food photos get fixed spaces: 16:9 at the top of a recipe and 1:1 in list rows. Recipes are generated as text, so the space stays empty and is hidden until a real photo exists. We do not use stock or AI-generated images.
- Icons follow SF Symbols. Each symbol name is listed in the Figma guide. In code we use the MIT-licensed cupertino_icons font, which also works on Android.

States and Dark Mode

Empty, error and loading states use the standard iOS empty-state pattern: one symbol, a short title, one sentence and at most one action. Examples are an empty saved list, recipes that failed to load, and a loading spinner while recipes are prepared. Every screen exists in light and dark versions with its own color tokens, and both versions pass the same checks.

Accessibility and how the design supports users

- Color is never the only signal: checked items use a filled circle with a check mark, uncertain ingredients have a symbol and a sentence, and switches change position as well as color.
- The app will support Dynamic Type, and it will label icon buttons and the delete action for VoiceOver and TalkBack.
- AI can make mistakes, so detected ingredients appear in an editable list before any recipe is generated, and uncertain items are listed first. The allergen note stays under the allergy switches.
- Saved recipes open offline, and the Offline screen explains what still works.
